

Smartphones for Beginners 2

Types of Cell Phones

- **iOS** (iPhone)
- **Android** (Samsung, LG, Moto etc)

How to Connect to Wi-Fi

1. "Settings"
2. "Wi-Fi"
3. Tap the name of the Wi-Fi network you want to join
4. Enter a password, if needed

Settings

- Wi-Fi
- Cellular Data
- Sounds (silent, vibrate, ringer)
- Display (brightness, font, screen timeout)
- Storage
- Etc.

Cellular Data vs Wi-Fi

Cellular Data:

- Connects you to the Internet
- Accessible almost anywhere
- An optional part of your cell phone bill
- There is usually a limit to how much data you can use per month

LTE

Wi-Fi:

- Connects you to the Internet
- Limited, location-based accessibility
- Part of your home Internet plan
- There is often Wi-Fi in public places
- Usually no limit / a very high limit on how much Wi-Fi you can use per month

Accessibility Settings

- Settings for vision, hearing and interaction
- Some examples are:
 - Voice Over
 - Braille Display
 - Magnification
 - High-Contrast Text
 - Assistive Touch
 - Connect to Hearing Aids

Apps

- App is short for application
- Apps are the icons on your homescreen
- Each app has a different function
- You can personalize your apps, but some apps cannot be removed

App Store / Play Store

- This is where you can download and purchase new apps
- To use the App Store / Play Store, you need to have an account

For iOS:

- Apple ID (Ex/ name@email.com)
- Password (Ex/ Password1243)

For Android:

- Google account (ex/ name@gmail.com)
- Password (ex/ Password1234)
